Education By Youth. For Youth. Together For The Climate.

Planting Seeds

The Climate Curriculum into Classrooms (CCiC) Project

Young People are Rewriting Climate Change Education

@ouryouth4theclimate

What is CCiC and Why it Matters

Half of the world's national curricula make no mention of climate change. **Our Youth 4 The Climate (OY4C)** was founded to close that gap, building a free, youth-led climate change education movement from the ground up, entirely online, during the pandemic.

Over 4.5 years, the organisation grew to **133 volunteers across 43 countries**, reaching over **100,000 people monthly** through its curriculum and community. But digital reach and ground-level impact are not the same thing. **The Climate Curriculum into Classrooms (CCiC) Project** was OY4C's answer to a simple question: **Is our work making a difference on the ground?**

From February to April 2026, OY4C Founder and Executive Director Ava Langridge travelled across 2 continents, delivering free, in-person climate workshops in schools and communities from Fiji to the Philippines. Simultaneously, OY4C team members ran parallel sessions in Nigeria, Indonesia, and Slovakia, testing whether the model could work without the founder in the room.

The answer was yes. This report documents what happened, what was learned, and what comes next.

3 Months

670 students

6 Countries

10 Schools

5 Continents

About the CCiC Workshop

The CCiC workshop is a **free, 1h30 in-person session** designed and delivered by young people for students aged ~14–18. OY4C brings all materials directly to the school, requiring **no cost or preparation** from teachers. The workshop uses the **fashion industry** as an accessible entry point into the wider climate picture, structured around five stages:

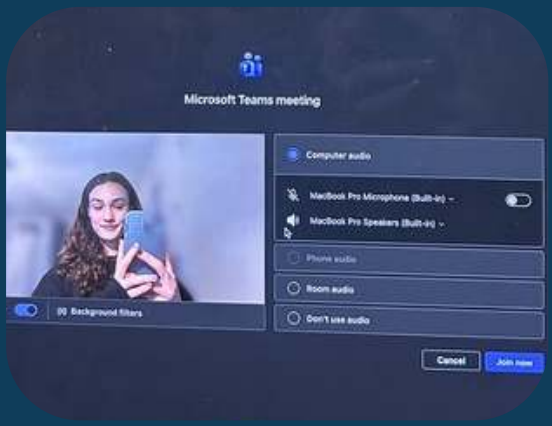

The CCiC workshop acts as **a taster for the full OY4CCurriculum:** a 13-topic, interdisciplinary programme already reaching classrooms in over 20 countries

Completing a CCiC session is an on-ramp to deeper integration: schools that wish to go further can access the full curriculum, free of charge, with OY4C support.

The CCiC Journey

It was time to get off the screen and into the room. To meet our peers, hand them something real, and find out whether what we'd built actually landed.

Feb 2026

Canada (Online)

18 students - Ages 12

The first CCiC session ran online.
Ava in London, students in Ontario, Canada.
Classic OY4C: starting from where we were before going for real.
It worked. And it confirmed we needed to go.

Nadi, Fiji

23 students - Ages 13-16

Walking into a real classroom for the first time, students engaging with materials OY4C had build. The first moment tangible impact became visible.

Feb 2026

Mar 2026

Auckland, NZ

5 community members

A community session with no structured teaching, hands on embroidery, open conversation about fashion's impact on people, planet, and economy.

The CCiC Journey

Feb to Apr 2026

Mar 2026

Rotorua, NZ

45 students - Ages 12-17

After the workshop, I felt **“full of knowledge & inspired to help the climate when it comes to clothing.”**

- 13 years old, Female

Bali, Indonesia

72 students - Ages 12

Students were very engaged and excited to share what they had made during the activity. Most students **designed a more sustainable version of their school uniform**, reinforcing that it is possible to take action even within their daily lives.

Apr 2026

Apr 2026

Cebu, Philippines

14 students - Ages 16-17 - Earth Day

They already knew how to repair and extend the life of their clothes. Sustainability was embedded in their everyday, they just didn't have a name for it yet. We brought the framework. They brought the practice. It went both ways. This was the **most honest exchange of knowledge of the entire trip.**

ReGen26

Bali, Indonesia - April 2026 - 250 students

ReGen26 was the first event of its kind: young people from schools around the world, convened at Green School Bali for a two-day collaborative conference. **OY4C ran two full CCiC workshops on-site,** to students who had come from across continents.

The most striking moment came from the contrast in the room. Students from Green School Bali, who'd had years of embedded climate change education, engaged differently to those who hadn't. Not less committed, but less shocked. Because this was already normal to them.

That's the goal. We need climate change education so embedded it stops being a revelation and starts being a baseline.

Meanwhile, across the world...

3 other Workshops

Mar 2026

Maiduguri, Nigeria

Muhammad, Story Creator

Pontianak, Indonesia

Deanna, Director of Community

Apr 2026

Apr 2026

Bratislava, Slovakia

Alexandra, Director of Curriculum

This was the proof of concept.
To succeed, CCiC needs OY4C's resources and anyone across the world willing to take initiative.

What We Learned

Access to climate change education shapes everything

Sustainability can be lived without being named

Peer-to-peer learning is categorically different

The model can be run by anyone

Community is the infrastructure

Founder Reflections

The most beautiful 3.5 months I could have asked for.

I went in wanting to test whether our work was making a difference on the ground. I came back knowing it was, but also knowing that the difference wasn't just in what students learned. It was in how it felt to be in those rooms. Together. Talking about something that matters. With young people from Fiji and Bali and Cebu and Rotorua who'd never met each other but were, already part of the same thing.

We talk a lot about climate change as a crisis. And it is. But these sessions reminded me it's also a reason to connect. A reason to show up. A reason to find each other, and remind each other there's a global effort to be the difference.

CCiC was always going to be more than a workshop. It was meant to be proof that young people can lead this, that communities want it, and that when you give a generation the knowledge and the space, they know exactly what to do with it.

We were just planting seeds.
But I've seen what they grow into.

Ava Langridge,
Founder and Executive Director
